Transformation

Secretary of Defense Donald Rumsfeld said, “Simply put, transformation is change. … most important, in the way all of the services work together… America's armed forces have to become more flexible and agile”

Transformation

Defense officials continue to aggressively move toward improving practices that will help the warfighters become more **interoperable** and that will provide capability to project and sustain **joint, coalition or service forces** with a smaller logistics footprint. A smaller footprint and **logistics interoperability** go a long way toward enhancement of flexibility and agility and are priorities in the transformation movement.

Exercise

- What is it?
  - Washer?
  - Shim?
  - Insulator?
- It depends

Standard Item Name Directory

ITEM NAME
WASHER,FLAT

STATUS	CONCEPT NO	FIIG	APP KEY	INC	COND CODE
A	1	A022B0	B	13393	1

ITEM NAME DEFINITION

A washer having a centrally located hole with a solid or laminated cross-section and two flat parallel bearing surfaces. The hole must be 75 percent or less than the largest dimension and the bearing surface finish is greater than 32 microinch (0.8 micrometer). The thickness cannot exceed 25 percent of the largest outside dimension. When the largest outside dimension is less than 1/4 inch or 6mm, the thickness must be 0.006 inches (0.15mm) or greater and for items 1/4 inch (6mm) or larger, the thickness must be 0.016 inches (0.4mm) or greater. The maximum tolerance is applied to dimensions and used as a determining factor. Items with separable lamination use SHIM. For items fabricated from ceramic or electrically rated materials by specification or industry standards use INSULATOR (1), WASHER. Excludes DISK, VALVE, graphite impregnated and lubricated items.

What is it?

- Truck, Utility?
- Trk, Util M998A?
- High Mobility Multi-purpose Wheeled Vehicle (HMMWV)?
- Truck, Utility: Cargo/Troop Carrier, 1-1/4 Ton4X4, M998?
- Again, it depends. All the names are used in a variety of Logistics databases.

WARFIGHTER NEEDS

“Interoperability is a mandate for the joint force of 2020 – especially in terms of communications, common logistics items, and information sharing.” Joint Vision 2020

When a Common Logistics Language is NOT used.

Picture the scene. Your local friendly supplier and a few simple items….

…….or so it would appear.

When a Common Logistics Language is NOT used

Interoperability is Adversely Affected

- Multiple product databases containing different types of product information
- Inconsistent product descriptions to describe the same products
- Duplicative/oversized inventories
- Overpriced products
- Codes created with no meaning to customer or supplier
- Different codes assigned to the same product
- No central control over maintenance of codes/ classification
- Reduced Combat Capability, Increased Cost

..... and many more.

Standardized Info Vital

- Standardized logistics information is a vital part of interoperability.
- Common Logistics Language is Vital to Interoperability on the Battlefield
  - Warfighters, suppliers, industry and others benefit from standardized data

Federal Catalog System (FCS)

Common Logistics Language

- 50 years of development, use and refinement
- The Federal Catalog System (FCS) is basis for the NATO Codification System (NCS)
- The FCS taxonomy is used internationally
- More than 200 data systems depend on FCS/FLIS
- National Stock Number (NSN) is key
- NSN is basis for item-level logistics decisions
- Electronic Code Commerce Management Association (ECCMA) has recommended the FCS standards, taxonomy and open technical dictionaries (eOTD) for worldwide use

and Commercial Connection

- Common Logistics Language
  - Allies are rapidly adopting the Federal Catalog System taxonomy (47 countries to date)
  - Additional nations awaiting final approval for membership
  - More and more of the commercial sector are on board with (ECCMA)
    - GM and GE as well as others are working with ECCMA to adopt the standards

Military/Commercial Bridge

"There is and always has been a philosophical gulf between the application of cataloging for military purposes and … for commercial. …commercial practices are not precise enough to support cost-effective military inventory management and military cataloging is far too detailed and costly for commercial purposes …ECCMA offers a way to bridge the gulf" Mr. Alan Williams, Asst Dept Minister, Canadian Dept of National Defence

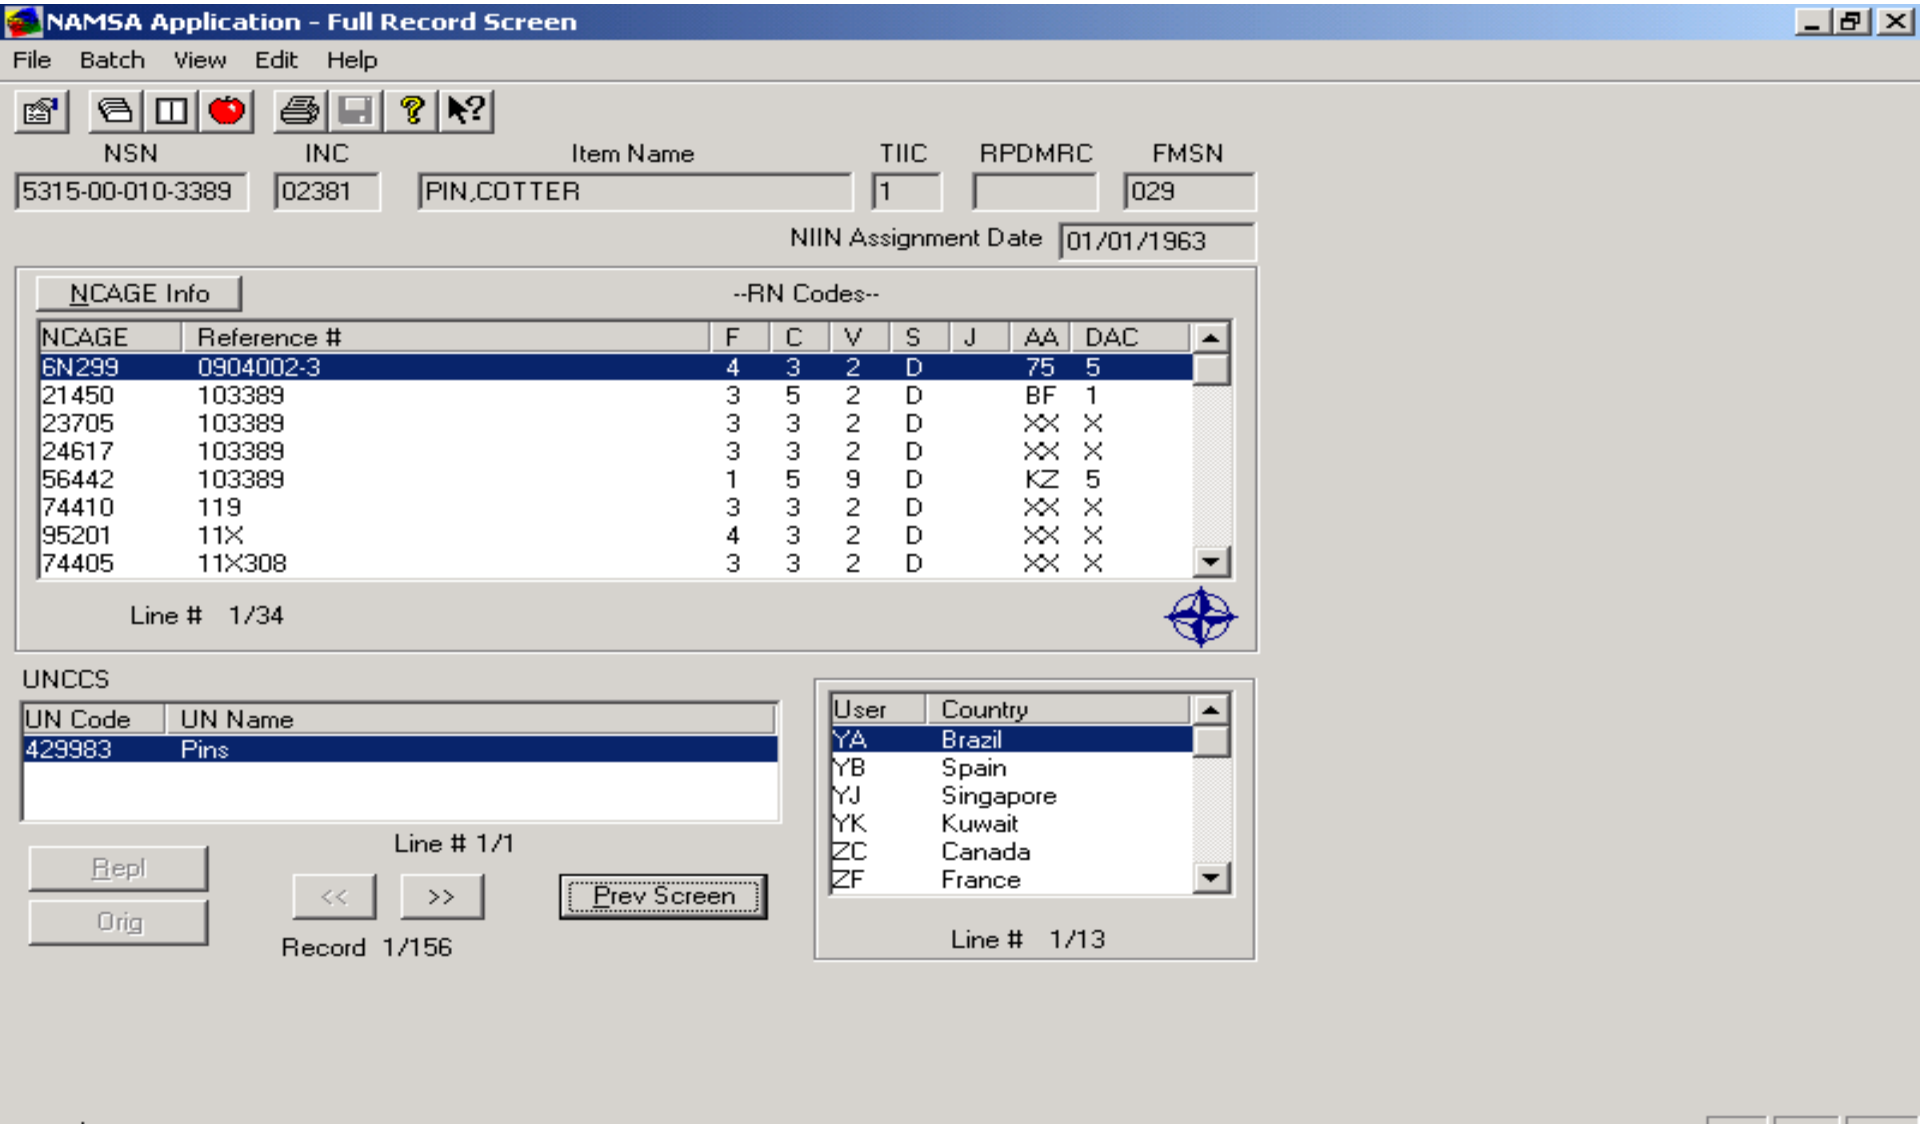
NATO MASTER CROSS REFERENCE LIST



Network Centric

- “Industry needs to deliver capabilities that are born “joint” and fit in a **network centric** environment.” MGen Dan Dick, Allied Command Transformation
- Federal Catalog System is the genetic code of a **network centric logistics information environment**.

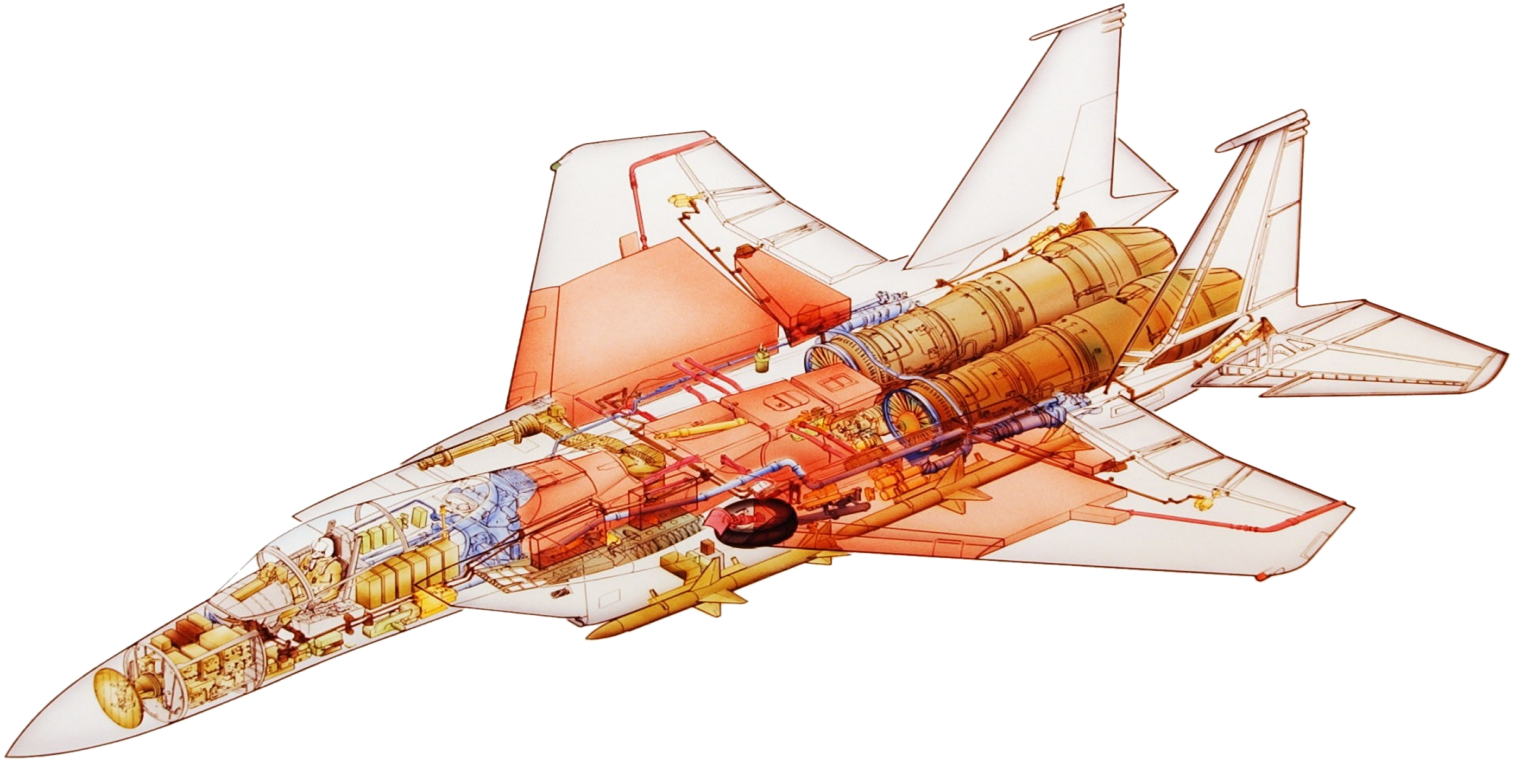
Data Storage

Data Quality / Integrity

Making Sense of

Data Quality/Integrity Crucial



"From a logistics information perspective…
an F-15 is just 171,000 parts flying
in close formation. Integrity of the data is crucial
to mission accomplishment"

Logistics Data and the Supply Chain

- A conservative estimate is that less than 10% of the people who are involved with getting items of supply to the warfighter actually handle the item.
  - **But 100% handle data associated with the item in the supply chain**.
- A common language of standardized, interoperable, stable and accurate logistics information is vital to good supply chain management.

NSN STATISTICS

- Approximately 16 million NSNs have been assigned
- Approximately 7+ million by the U.S. and 8+ million by the other NATO countries
- Approximately 30 million reference numbers have been registered on these NSNs
- Approximately 1 million manufacturers and other organizations are registered
- These NSNs contain more than 22 million user registrations

SUMMARY

A Common Logistics Language is a Vital Component to Interoperability on the Battlefield

“Changes in the information environment make information superiority a key enabler of the transformation of the operational capabilities of the joint force and the evolution of joint command and control “ Joint Vision 2020
